This independent manual provides airport planners and architects with an essential planning guide and reference tool, based on the author's extensive experience in the field and involvement in developing best practice airline and airport industry guidelines. Chapters cover topics such as demand forecasting, masterplan development, terminal pier and satellite infrastructure, baggage handling, apron design and airport security. Provides airport planners and architects with an essential guide and reference tool, based on the author's extensive experience. Discusses key airport planning issues including forecasting demand, planning and strategic objectives and airport security. Outlines important airport planning principles specified by IATA for masterplan development featuring evaluation techniques and independent development planning.

TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

After an examination of fundamental theories as applied to civil engineering, authoritative coverage is included on design practice for certain materials and specific structures and applications. A particular feature is the incorporation of chapters on construction and site practice, including contract management and control.

This comprehensive guide to the planning and design of airport terminals and their facilities covers all types of airport terminal found around the world and highlights the environmental and technical issues that the designer has to address. Contemporary examples are critically reviewed through a series of case studies. This new edition covers the most recent examples of high quality, technically advanced designs from the Far East, Europe and North America. This book will be a source of inspiration and guiding principles for those who design, commission or manage airport buildings.

Planning: Buildings for Habitation, Commerce, and Industry focuses on the planning, design, materials, and construction of various structures for habitation. The selection first discusses the planning, construction, and design of houses, flats, and residential hostels. The discussions focus on siting, planning, space conditions, statutory requirements legislation and authorities, heating and water supply, common rooms, and accommodation. The manuscript also takes a look at planning, construction, and design of hotels, motels, and camps for motorists. The book reviews the construction, planning, materials, and design of office buildings and banks, including characteristics of buildings, types of accommodation, furnishing, and materials and equipment. The text also ponders on the design, planning, and construction of department stores, supermarkets, shops, farm and agricultural buildings, factories, airports, and warehouses. The selection is a dependable source of reference for readers and construction planning specialists interested in the planning, design, and construction of buildings.
