ARM Assembly Language Part-I Architecture
Assembly Language Programming Edition
It is designed for introductory courses in
computer architecture and assembly language
programming, and presents this material in
the context of the world of computing. The
two major processor chips, Intel 8086 and
Motorola 68000 processors are covered in
detail, whilst the general principles of
computer architecture and assembly language
programming are explained.

In computer programming, assembly language (or assembler language), often abbreviated asm, is any low-level programming language in which there is a very strong correspondence between the instructions in the language and the architecture's machine code instructions. Because assembly depends on the machine code instructions, every assembly language is designed for exactly one specific computer ...
