

## Evaluation Board Document Mouser Electronics

Right here, we have countless books **evaluation board document mouser electronics** and collections to check out. We additionally have the funds for variant types and next type of the books to browse. The suitable book, fiction, history, novel, scientific research, as well as various extra sorts of books are readily affable here.

As this evaluation board document mouser electronics, it ends taking place swine one of the favored books evaluation board document mouser electronics collections that we have. This is why you remain in the best website to look the amazing books to have.

The SiC403DB evaluation board features 3V to 28V input range, 6A continuous output current, and a selectable frequency from 200kHz to 1MHz with an external resistor. Typical applications include high-density cards, distributed power architectures (with 5V, 12V, or 24V rails), storages, DSL, computing, broadband, networking, LAN/WAN, optical, test, and measurement.

This evaluation board uses four GS61004B GaN E-HEMTs in conjunction with two high-speed GaN E-HEMT Drivers. The GS61004B-EVBCD evaluation board generates low dead times to minimize crossover distortion in class-D applications. This evaluation board features E-HEMT drivers which provide switching transition speeds in the sub nano-second range for hard switching applications.

Mouser is now stocking the TMF8801-EVM evaluation kit from ams. The kit allows engineers to evaluate the operation of the ams TMF8801 1D time-of-flight (ToF) sensor for applications such as smartphones, industrial robotics, and autonomous appliances. The TMF8801-EVM includes a ToF sensor enclosure and sample glass, USB type A to micro-USB cable, USB flash drive with EVM GUI software, and EVM documentation.
