A comprehensive introduction to using the tools and techniques of neuroscience to understand how consumers make decisions about purchasing goods and services. Contrary to the assumptions of economists, consumers are not always rational actors who make decisions in their own best interests. The new field of behavioral economics draws on the insights of psychology to study non-rational decision making. The newer field of consumer neuroscience draws on the findings, tools, and techniques of neuroscience to understand how consumers make judgments and decisions. This book is the first comprehensive treatment of consumer neuroscience, suitable for classroom use or as a reference for business and marketing practitioners. After an overview of the field, the text offers the background on the brain and physiological systems necessary for understanding how they work in the context of decision making and reviews the sensory and perceptual mechanisms that govern our perception and experience. Chapters by experts in the field investigate tools for studying the brain, including fMRI, EEG, eye-tracking, and biometrics, and their possible use in marketing. The book examines the relation of attention, memory, and emotion to consumer behavior; cognitive factors in decision making; and the brain's reward system. It describes how consumers develop implicit associations with a brand, perceptions of pricing, and how consumer neuroscience can encourage healthy behaviors. Finally, the book considers ethical issues raised by the application of neuroscience tools to marketing. How can the latest brain research help increase your sales? Because people are inundated daily by an average of 10,000 sales messages, selling is now tougher than ever. That's why you need to learn what neuroscience has uncovered that will immediately increase your selling and influencing effectiveness. Unveiling the latest brain research and revolutionary marketing practices, authors Patrick Renvoisé and Christophe Morin teach highly effective techniques to help you deliver powerful, unique, and memorable presentations that will have a major, lasting impact on potential buyers such as: The 6 stimuli that always trigger a response The 4 steps to align content and delivery of your message The 6 message building blocks to address the "old brain" The 7 powerful impact boosters to set your delivery apart from the rest Once you know how the decision-making part of the brain works, you'll quickly begin to deliver more convincing sales presentations, close more deals, create more effective marketing strategies, and radically improve your ability to influence others.

Marketer Perry Marshall converts the widely known 80/20 principle into a master framework that multiplies the power of everything you do in sales and marketing and makes scary-accurate predictions. It's the ultimate secret to selling more while working less. Guided by famed marketing consultant and best-selling author Perry Marshall, sales and marketing professionals save 80 percent of their time and money by zeroing in on the right 20 percent of their market - then apply 80/202 and 80/203 to gain 10X, even 100X the success. With a powerful 80/20 software tool (online, included with the book), sellers and marketers uncover how to slash time-wasters; advertise to hyper-responsive buyers and avoid tire-kickers; gain coveted positions on search engines; differentiate themselves from competitors and gain esteem in their marketplace. With the included tools they'll see exactly how much money they're leaving on the table, and how to put it back in their pockets. Sellers will identify untapped markets, high-profit

opportunities and incremental improvements, gaining time and greater profit potential. Supported by online tools from Marshall, including The 80/20 Power Curve, a tool that helps you see invisible money, and a Marketing DNA Test, a personal assessment that zeroes in on one's natural selling assets, this timeless guide promises to change the game for seasoned and novice marketers and sellers.

How do we make decisions on what to buy and what to pay for it? Why are we affected by brands and pricing when making our choices or just experiencing something? Traditional approaches to such questions have relied on the behavioural and social sciences. However, today we see a dramatic shift in our understanding of consumption behaviours. Recent advances in modern neuroscience, and how it combines with economics and psychology, have allowed us to study of how different brain functions serve consumer behaviour. A commercial industry is emerging that offers novel ways to assess consumer attention, emotion and memory. This book, written by one of the leading figures in neuromarketing and consumer neuroscience, offers a comprehensive insight into the workings of the brain and its mind, and how this knowledge can inform our understanding of consumption behaviours. The book offers both basic and front-end academic insights, and includes chapters on sensation and perception; attention and consciousness; emotion and feeling; memory and learning; motivation and preference; and decision making. It also offers up to date and comprehensive insight about how the tools of neuroscience can be applied to assess consumer cognition and emotion. This book works as a landmark for this emerging academic and commercial disciplines, and to become a standard book of reference, just as the textbooks by Kotler and Keller have been for advertising and marketing.

Decoding the Irrational Consumer was written to help marketing practitioners demystify neuromarketing, a relatively new field of marketing research used to understand consumer response to marketing stimuli. This book presents in plain terms the key theoretical tools required to implement neuromarketing studies and achieve desired research outcomes. Marketers and researchers will learn how to effectively and confidently brief data processors, and confer with neuroscientists and technicians. They will gain keen understanding of recent developments in behavioural science and data-processing technology, as well as sophisticated neuromarketing tools used to understand subconscious responses including behavioural economics, eye-tracking, implicit response measures, and facial coding. The author discusses when to apply these techniques and others, how to combine them effectively and how to correctly interpret resulting data to generate valuable insights that aid in decision making. About the series: The Marketing Science series makes difficult topics accessible to marketing students and practitioners by grounding them in business reality. Each book is written by an expert in the field and includes case studies and illustrations enabling marketers to gain confidence in applying the tools and techniques and in commissioning external research.
